

# What is VirtualPCCenter?

## VirtualPCCenter

### Desktop Consolidation solution

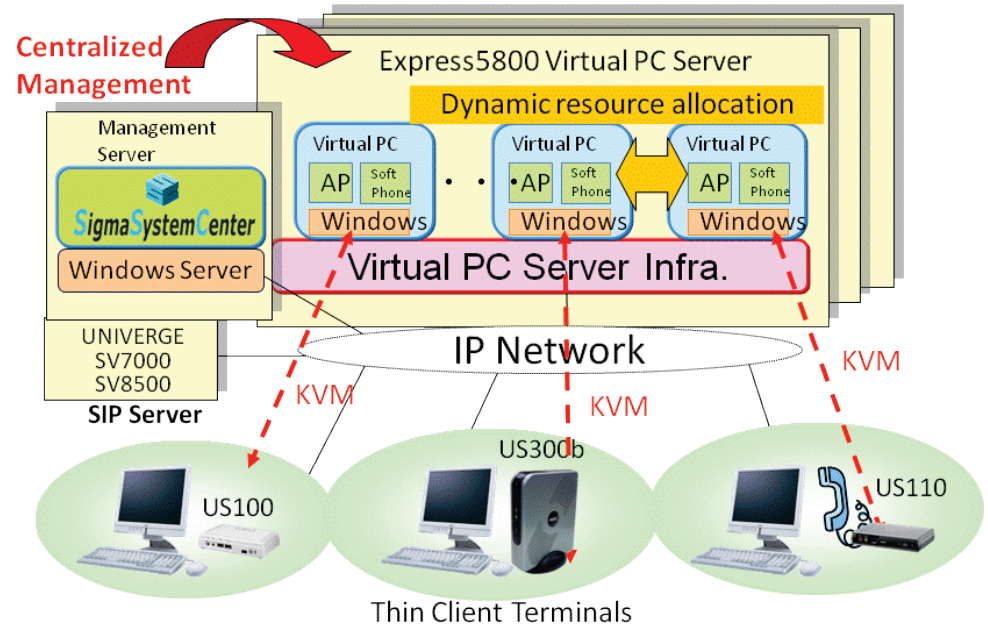

- Simplify virtual PC management

### Thin Client implementation with virtual PC technology

- Run multiple virtual PC environments on a single server

### Pre-packaged, all inclusive solution

- Hardware, software, and services from a single source – NEC.

# VPCC Features

Consolidated virtualized desktop system

Optimized Resource Allocation

- High load virtual PCs can be migrated to secondary Virtual PC Servers seamlessly.
- Server resource load can be monitored and reallocated to other less impacted servers automatically.

Simple migration/deployment

- Most applications will run properly on a virtualized environment.
- Deployment of new virtual PCs are as simple as a few mouse clicks.

Superior Failure Countermeasures

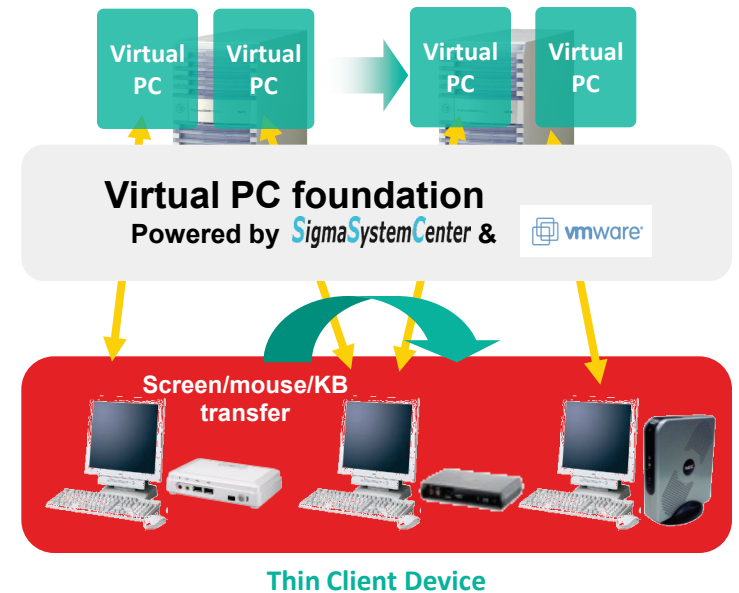

- In the unlikely event of a server failure, virtual PCs can be recreated from a backup through quick recovery.

Increased operability & serviceability

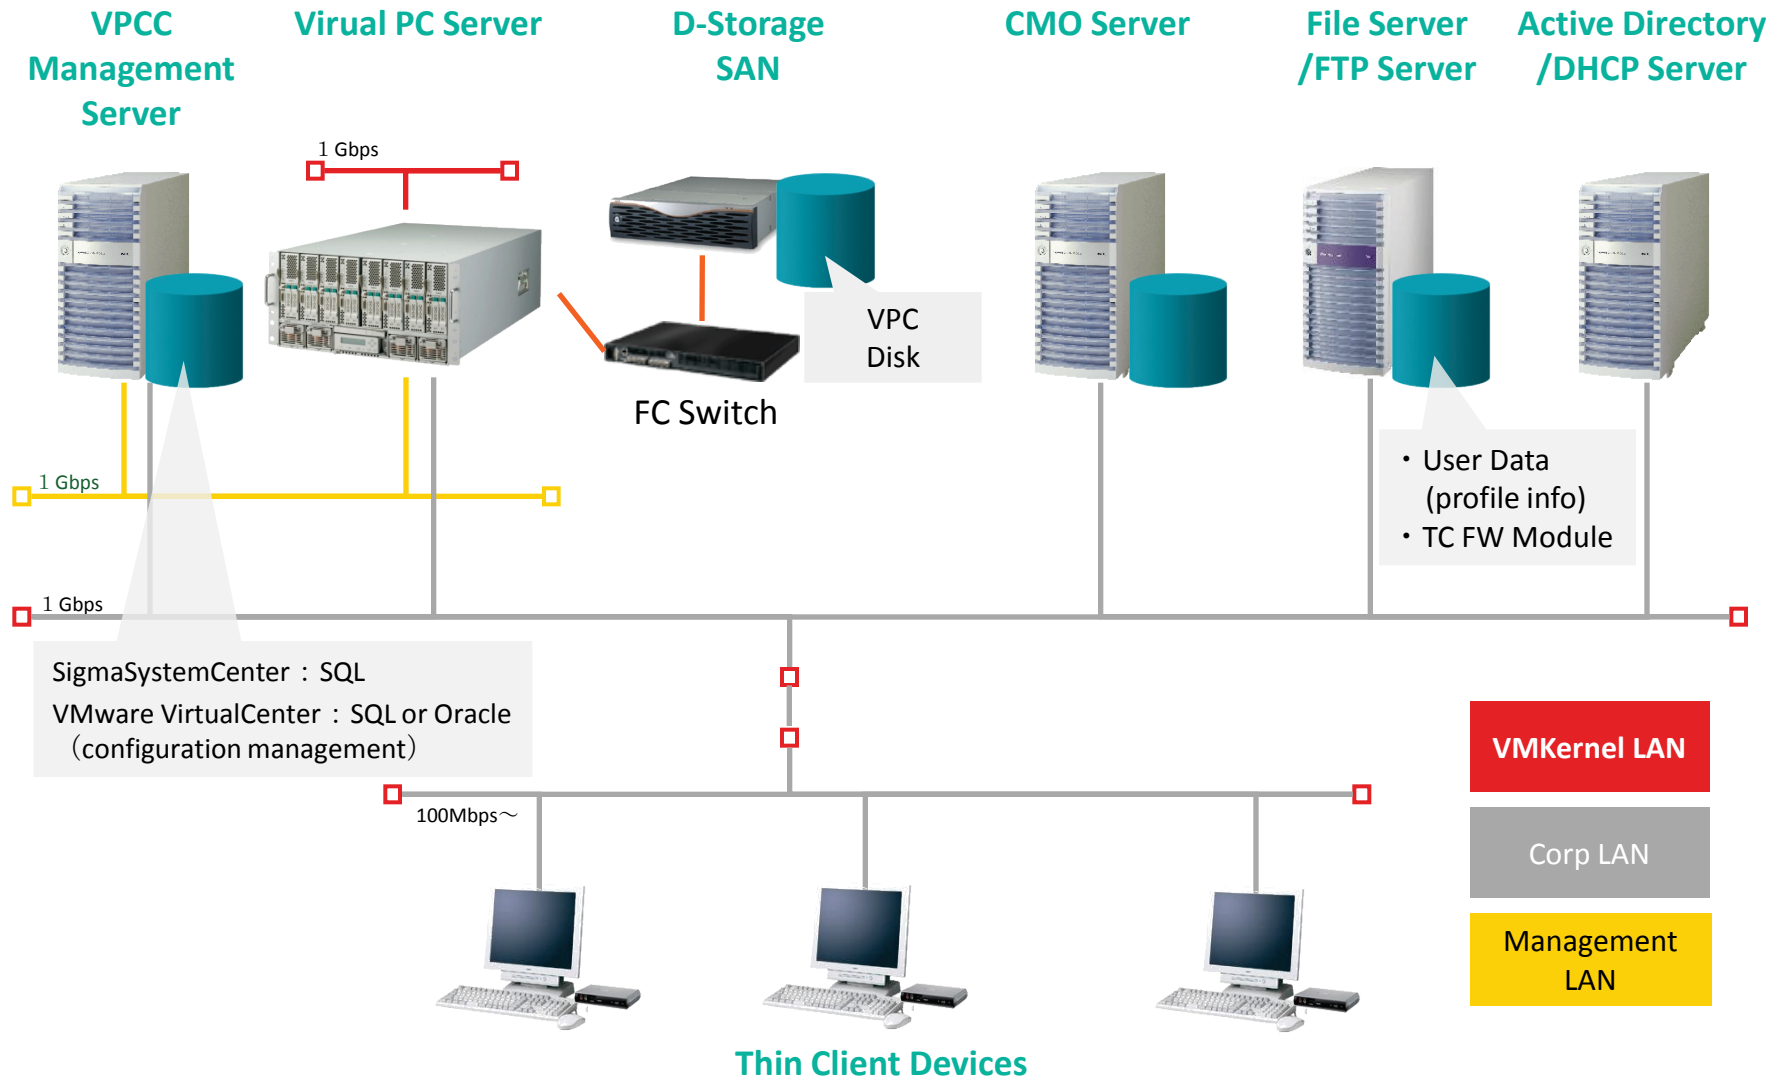

Data Security

Power Saving Solution

## Migration of virtual PCs at high server work load
